Ugochukwu Meshach

Full-Stack Software Developer | React, Node.js, Python, MongoDB, AWS, CI/CD

Lagos, Nigeria (open to remote roles worldwide) | +234 703 998 7705 | ugochukwumeshach5@gmail.com
Portfolio: ugobuezeweb.vercel.app | GitHub: github.com/ugobuez | LinkedIn: linkedin.com/in/ugochukwu-meshach-69b830285

PROFESSIONAL SUMMARY

Full-Stack Software Developer who builds, deploys, and supports production web applications on the MERN stack (MongoDB, Express.js, React, Node.js), with additional experience in Python/Django and TypeScript. Completed a six-month software developer internship on the SAGE LMS platform, where I automated CI/CD deployments (60% less manual deployment time), cut API response times by 40% through MongoDB query and index optimization, and resolved 15+ production issues. Built and deployed four full-stack projects spanning e-commerce, fintech, geospatial routing, and AI-assisted job matching. AWS Certified Generative AI Developer – Professional (AIP-C01) with hands-on LLM integration experience. Seeking full-stack, backend, DevOps/cloud, or AI-integration roles.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3

Frontend: React, Next.js, React Router, Vite, Tailwind CSS, Bootstrap, Recharts, Leaflet.js, Responsive Design, SSR/SSG

Backend & APIs: Node.js, Express.js, Django, Django REST Framework, RESTful APIs, JWT Authentication, bcrypt, Role-Based Access Control (RBAC), API Security

Databases: MongoDB, Mongoose, MongoDB Atlas, Query Optimization, Indexing, Data Modeling

DevOps & Cloud: AWS, CI/CD (GitHub Actions, Vercel, Railway), Docker, Git, GitHub, Monitoring, Logging, Alerting

AI & Automation: LLM Integration, Prompt Engineering, Generative AI, Llama 3.1 (OpenRouter), n8n Workflow Automation, AI-Assisted Development (Claude Code, ChatGPT, Microsoft Copilot)

Testing & Practices: Jest, Test-Driven Development (TDD), Integration Testing, Test Planning, QA, Agile/Scrum, Code Review, Technical Documentation, System Design, Root-Cause Analysis

Familiar with: Kubernetes, Jenkins, Prometheus, Grafana, Google Cloud, Azure, GraphQL, Java, PostgreSQL, MySQL, Linux

PROFESSIONAL EXPERIENCE

AI Training Expert (Contract, Remote) | micro1 | Sep 2026 – Present

- Evaluate and train next-generation AI models by applying technical expertise to assigned tasks, following detailed guidelines and quality standards.
- Work independently in a fully remote, task-based engagement while following strict confidentiality and data-security requirements.

Intermediate Software Developer (Internship) | May 2025 – Oct 2025

SAGE LMS Platform, Sage Institute (internship partner of Pluralcode Academy) | *Lagos, Nigeria*

- Designed and maintained CI/CD pipelines on Vercel and Railway, cutting manual deployment time by 60% and enabling repeatable releases across environments.
- Containerized services with Docker and added automated build, test, and deploy steps to the pipeline, keeping environments consistent across the team.
- Built secure RESTful APIs with JWT authentication and role-based access control (RBAC) to protect data across platform endpoints and reduce security-related incidents.
- Optimized MongoDB queries and indexing, improving average API response time by 40% under peak load.
- Implemented monitoring, logging, and alerting for API health and performance; diagnosed and resolved 15+ production issues through root-cause analysis.
- Built responsive React and TypeScript interfaces that reduced UI-related support requests by 25%.
- Worked in an Agile/Scrum team of 6+ engineers (sprint planning, retrospectives, code reviews); mentored junior developers through code-review feedback and pair programming; contributed to system-design and architecture reviews.
- Wrote API, deployment, and infrastructure documentation, support runbooks, and test plans; joined the on-call support rotation, triaging requests and deploying fixes under guidance.

PROJECTS

GadgetNG – Price-Comparison & Reselling E-Commerce Platform
Live: gadget-store-ebon.vercel.app | Code: github.com/ugobuez/GadgetStore
React, React Router, Express.js, MongoDB, Mongoose, Recharts, JWT

- Built a full-stack MERN price-comparison and reselling platform for the Nigerian gadget market (price comparison across Jumia, Konga, and Slot), with a 20-product catalog, price history, a persistent cart drawer, and customer signup, login, and password-reset flows.
- Engineered tiered profit-margin pricing (5% markup above NGN 500,000, 10% otherwise) and role-based JWT authentication separating admin and customer access; enforced field-level API authorization so supplier cost and sourcing data are stripped from non-admin responses.
- Built an admin dashboard for product management, margin auditing (supplier cost, markup, retail price, net profit), order tracking, and payment settings, plus a two-step WhatsApp bank-transfer checkout with receipt upload; QA-tested end to end with written test plans.

HirePilot – AI Job Matching & Resume-Tailoring Platform
Live: hire-pilot-job.vercel.app | Code: github.com/ugobuez/HirePilot
React, Node.js, Express.js, MongoDB, Llama 3.1 (OpenRouter), JWT, REST APIs

- Built a full-stack platform with JWT authentication, bcrypt password hashing, and a six-stage application pipeline tracker (Scraped, Tailored, Applied, Interviewing, Offered, Rejected).
- Engineered an eight-category weighted ATS-scoring engine and an LLM resume-tailoring service (Llama 3.1 via OpenRouter) with anti-hallucination prompt guardrails that prevent invented skills or experience.
- Designed a job-discovery engine with a registry of 100+ job sources across five priority tiers, cross-source deduplication, job-quality scoring, filtered search (remote, country, tech stack, salary, visa sponsorship), rate-limited request queues, and in-memory TTL caching.

ELD Trip Planner – FMCSA Hours-of-Service Route Planner
Live: eld-trip-planner-mu.vercel.app | Code: github.com/ugobuez/Eld-trip-planner
Python, Django REST Framework, React (Vite), MongoDB Atlas, Leaflet.js, OSRM

- Built a full-stack trip planner for truck drivers with a Django REST Framework API, a React (Vite) frontend, and MongoDB Atlas storage for every trip calculation.
- Implemented a Hours-of-Service rules engine (70-hour/8-day cycle, 11-hour driving limit, 14-hour on-duty window, 30-minute breaks, 10-hour rest periods, fuel stops) that plans multi-day trips around FMCSA limits.
- Integrated Leaflet.js with OpenStreetMap, OSRM routing, and Nominatim geocoding for an interactive route map with color-coded stops, and generated canvas-drawn daily ELD log sheets with PDF download.

Ugobueze – Fintech Gift Card & Referral Platform
Live: ugobueze-web.vercel.app | Code: github.com/ugobuez/Ugobueze-web
React, Node.js, Express.js, MongoDB, JWT, Cloudinary, REST APIs

- Built and deployed a secure fintech platform for gift-card transactions and referral tracking, with a React frontend on Vercel and a Node.js/Express REST API backed by MongoDB.
- Implemented JWT authentication, role-based access control, and Cloudinary media storage; designed API endpoints and middleware that maintain sub-300 ms response times.

EDUCATION

Pluralcode Academy | Lagos, Nigeria | Jun 2024 – Dec 2024
Software Engineering, Full-Stack Track. Coursework: React, Node.js, TypeScript, MongoDB, REST APIs, CI/CD, Docker, testing, Agile, system design.

CERTIFICATIONS & AWARDS

- **AWS Certified Generative AI Developer – Professional (AIP-C01)** | Amazon Web Services | Apr 2026
- **Citi ICG Technology Software Development Job Simulation** | Forage (virtual experience program) | Jun 2026 – modeled a loan-management lifecycle with a UML state diagram and built a stock-market risk visualization tool in Java with Python data parsing
- **Fully Funded Generative AI Scholarship, Merit Award for Technical Excellence** | Jan 2026
